FOCUS

UI/UX & SEO Redesign

01 Project Overview

This project focuses on transforming an outdated, legacy-style landing page of WebDesign Cochin (established 2007) into a modern, high-performance, SEO-optimised conversion landing page.

The existing website reflects early-era web design patterns with limited visual hierarchy, weak conversion structure, and outdated UX patterns that do not align with current SEO and user behaviour standards.

The objective was to redesign the landing page using modern UI/UX principles while simultaneously improving SEO structure, keyword alignment, and conversion-focused content architecture.

The final solution delivers a premium, modern agency-style landing page designed to:

Improve user engagement	Increase conversion rate (lead generation)
Strengthen Google search visibility	Align with modern design systems and UX expectations

02 Business Background

WebDesign Cochin is a Kerala-based digital agency operating since 2007. The company has long-term market presence, but its digital interface reflects outdated design principles that limit its ability to compete with modern agencies.

Services offered:

Web Design & Development	SEO Services	E-commerce Solutions
Digital Marketing	Branding	

Key Business Challenge:

Despite strong experience and service offerings, the outdated landing page reduces:

Trust perception	Conversion efficiency
SEO performance	Mobile usability experience

03

SEO Goals

Primary Goals	Secondary Goals	Conversion Goals
Improve keyword targeting for "web design Kochi", "SEO services Kerala"	Optimise content readability for both users and search engines	Increase lead submissions via CTA optimisation
Increase organic visibility through better on-page structure	Improve internal section linking and crawlability	Improve click-through rate on "Request a Quote"
Enhance semantic SEO architecture (H1-H3 hierarchy)	Strengthen E-E-A-T signals (Experience, Expertise, Authority, Trust)	Enhance trust signals (testimonials, stats, results)
Improve dwell time and reduce bounce rate		

04

Audit Methodology

The following structured UX + SEO audit approach was used:

1	UX Heuristic Analysis	Navigation clarity, visual hierarchy evaluation, CTA placement effectiveness, and content readability scoring.
2	SEO Structural Audit	Heading structure (H1, H2, H3), keyword placement, meta optimisation review, and content depth analysis.
3	Conversion Flow Analysis	User journey mapping (landing service contact), CTA friction points, and trust signal placement.
4	Competitive Benchmarking	Comparison with modern agency websites, UI pattern analysis, and content strategy comparison.

05

Tools Used

HTML5 / CSS3 (custom design system)	Responsive UI design principles
Claude AI (initial design generation support)	Google SEO best practices (on-page optimisation framework)
UX design principles (F-pattern, Z-pattern, visual hierarchy theory)	

06

Key Findings

UX Issues

Outdated visual hierarchy (early 2007-style layout)
Weak CTA visibility and inconsistent placement
Low visual engagement (no modern spacing or structure)
Limited storytelling flow

SEO Issues
Weak heading structure (non-semantic hierarchy)
Limited keyword optimisation
Low content depth for service sections
Poor internal section linking structure

Conversion Issues
No strong trust-building narrative above the fold
CTA not emotionally or visually compelling
Lack of modern persuasion elements (stats, proof, outcomes)

07 Implementation

The redesigned landing page was implemented with a conversion-first + SEO-first architecture:

UI/UX Improvements
Modern dark-themed premium design system
Strong hero section with emotional headline
Clear CTA hierarchy (primary + secondary actions)
Bento-style service grid for better scanning
Section-based storytelling flow

SEO Improvements
Proper H1-H3 hierarchy for indexing
Keyword-rich but natural content structure
Semantic section segmentation (Services, Process, Results)
Improved internal navigation anchors

Conversion Improvements
Added trust metrics (projects, ratings, years active)
Testimonials structured for credibility
Results section to show measurable impact

Multiple CTA entry points across scroll journey

08 **SEO Recommendations**

On-Page SEO
Maintain single H1 per page (hero section)
Optimise meta title for CTR (A/B test versions recommended)
Strengthen service-related keyword clusters
Add FAQ section for long-tail keywords
Content SEO
Expand service descriptions with keyword variations
Add blog integration for topical authority
Include location-based keywords (Kochi, Kerala, Ernakulam)
Technical SEO
Improve Core Web Vitals (LCP, CLS, FID)
Compress assets for faster load time
Ensure mobile-first indexing compliance

09 **Priority Action Plan**

Phase	Actions
Phase 1 — High Priority	Finalise redesigned landing page structure · Implement SEO-optimised headings and metadata · Improve CTA placement and visibility
Phase 2 — Medium Priority	Add blog/content section for SEO expansion · Introduce FAQ schema markup · Improve internal linking strategy
Phase 3 — Long-Term	A/B testing for CTA performance · Continuous keyword optimisation · Performance tracking via analytics tools

10 **Expected Results**

After implementation, the expected outcomes include:

30–60% increase in organic traffic	Improved Google ranking for target keywords
20–40% increase in lead conversion rate	Reduced bounce rate due to improved UX flow
Stronger brand perception as a modern digital agency	

This project demonstrates how a legacy website can be transformed into a modern, high-performing digital asset through a combination of UI/UX redesign and SEO optimisation strategy.

By integrating conversion-focused design principles with structured SEO architecture, the redesigned landing page positions WebDesign Cochin as a competitive, modern digital agency ready for current market demands.
