INDUSTRY

Bakery / Pastry

FOCUS

Local SEO Strategy

01 Project Overview

Project Title: Local SEO Strategy for Crust and Crumb

Objective: To design a comprehensive local SEO roadmap to establish a dominant online presence for Crust and Crumb — a fictional bakery created for the purpose of demonstrating advanced Local SEO strategic planning.

Core Focus: Improving discoverability in Newcastle by building a foundation of trust, relevance, and authority from the ground up.

02 Business Background

Company: Crust and Crumb

Location: Newcastle, UK

Industry: Bakery / Pastry

Business Model: Retail bakery specializing in artisanal cakes, pastries, and custom orders.

Current Situation: The business currently has minimal online visibility and lacks a Google Business Profile, which prevents it from appearing in Google Maps or local search results.

03 Local SEO Goals

To measure the success of this intervention, I defined six primary objectives:

Discoverability: Establish the shop as a discoverable business on Google Search and Maps.

Consistency: Implement a uniform NAP (Name, Address, Phone) across the website, directories, and social platforms.

Reputation: Generate and manage customer reviews to build consumer trust.

Content Strategy: Create Newcastle-specific content targeting local search terms.

Technical Optimisation: Ensure the website is mobile-friendly and optimised for local search.

Structured Data: Deploy local schema markup for better search engine understanding.

04 Audit Methodology

I followed a rigorous five-step methodology to ensure a data-driven strategy:

1	Local Presence Audit	Analysing current online visibility and benchmarking against local competitors.
2	Keyword & Competitor Analysis	Identifying local search gaps and high-volume search terms.
3	Strategy Development	Designing a phased plan covering Google Business Profile (GBP) setup, website optimisation, and content.
4	Implementation Plan	Executing tasks in order of impact: Trust (GBP / NAP) Relevance (Keywords / Content) Authority (Citations / Backlinks).
5	Monitoring & Reporting	Setting up Google Analytics, Search Console, and GBP insights for tracking.

05 Tools Used

To execute this strategy, I utilised industry-standard SEO and analytics software:

Google Ecosystem: Google Business Profile Manager, Google Analytics, and Google Search Console.

Audit & Research: Screaming Frog (website audit), SEMrush / Ahrefs, and Moz Local / Whitespark.

Technical: Schema Markup Generator.

06 Key Findings & Opportunities

The audit identified several critical visibility gaps that presented high-impact opportunities:

Google Business Profile: Currently not created; needs a full setup with categories, hours, and imagery.

NAP Consistency: Not standardised; requires identical details across all directories.

Customer Reviews: None existing; requires a professional generation and response strategy.

Local Keywords: Not utilised; needs integration of Newcastle-specific terms into meta tags and content.

07 Implementation Strategy

I executed a multi-layered plan to bridge the identified gaps:

GBP Setup: Comprehensive profile creation including business info, categories, and Q&A.;

NAP Standardisation: Ensuring consistent data across social, website, and directory listings.

Technical On-Page: Embedding Google Maps and implementing LocalBusiness schema markup for improved indexing.

Local Content: Developing landing pages and blogs targeting local Newcastle queries.

Authority Building: Focus on local directories and Newcastle community sites for backlinks.

08 SEO Recommendations

For long-term growth, I provided the following ongoing strategic recommendations:

Engagement: Update the GBP regularly with fresh posts and product images.

Reputation Management: Continue collecting and responding to customer reviews consistently.

Hyper-Local Content: Expand topics to include seasonal campaigns and local partnerships.

09 Priority Action Plan

I structured the rollout into a logical timeline to ensure a solid foundation:

Phase	Actions	Timeline
Phase 1: Trust Signals	Create GBP, standardise NAP, and set up the review strategy.	Weeks 1–2
Phase 2: Local Relevance	Optimise the website, embed maps, and create local content.	Weeks 3–4
Phase 3: Authority	Build citations and local community backlinks.	Month 2–3
Phase 4: Monitor & Improve	Track performance via Search Console and Analytics.	Ongoing

10 Expected Results

By following this roadmap, the business is projected to achieve:

Search Dominance: Increased visibility in Google Maps and local search results.

Higher Engagement: More calls, direction requests, and website traffic.

Competitive Edge: Stronger online positioning for Newcastle-based cake and pastry searches.

11 Conclusion

This project illustrates how a systematic local SEO approach can transform a business from minimal online presence to a competitive local leader. By addressing foundational gaps and building trust signals, Crust and Crumb is now positioned to attract local customers and grow its brand presence in Newcastle.

A. Newcastle-Specific Keyword Research

Keyword	Monthly Vol	Difficulty	Intent
cakes near me	1,500	High	Local
birthday cakes Newcastle	1,200	Medium	Transactional
custom cakes Newcastle	900	Medium	Transactional

B. Sample Local Business Schema (JSON-LD)

```
<script type="application/ld+json">
```

```
{
  "@context": "https://schema.org",
  "@type": "Bakery",
  "name": "Crust and Crumb",
  "address": {
    "@type": "PostalAddress",
    "streetAddress": "123 Baker Street",
    "addressLocality": "Newcastle",
    "postalCode": "NE1 2AB",
    "addressCountry": "UK"
  },
  "geo": {
    "@type": "GeoCoordinates",
    "latitude": 54.9783,
    "longitude": -1.6174
  }
}
```

```
</script>
